PROJECT REPORT

Appendix X	Art Display Photos	41 - 42
Appendix Y	Check to Beneficiary	43

Appendix A (Google Maps Picture of School)

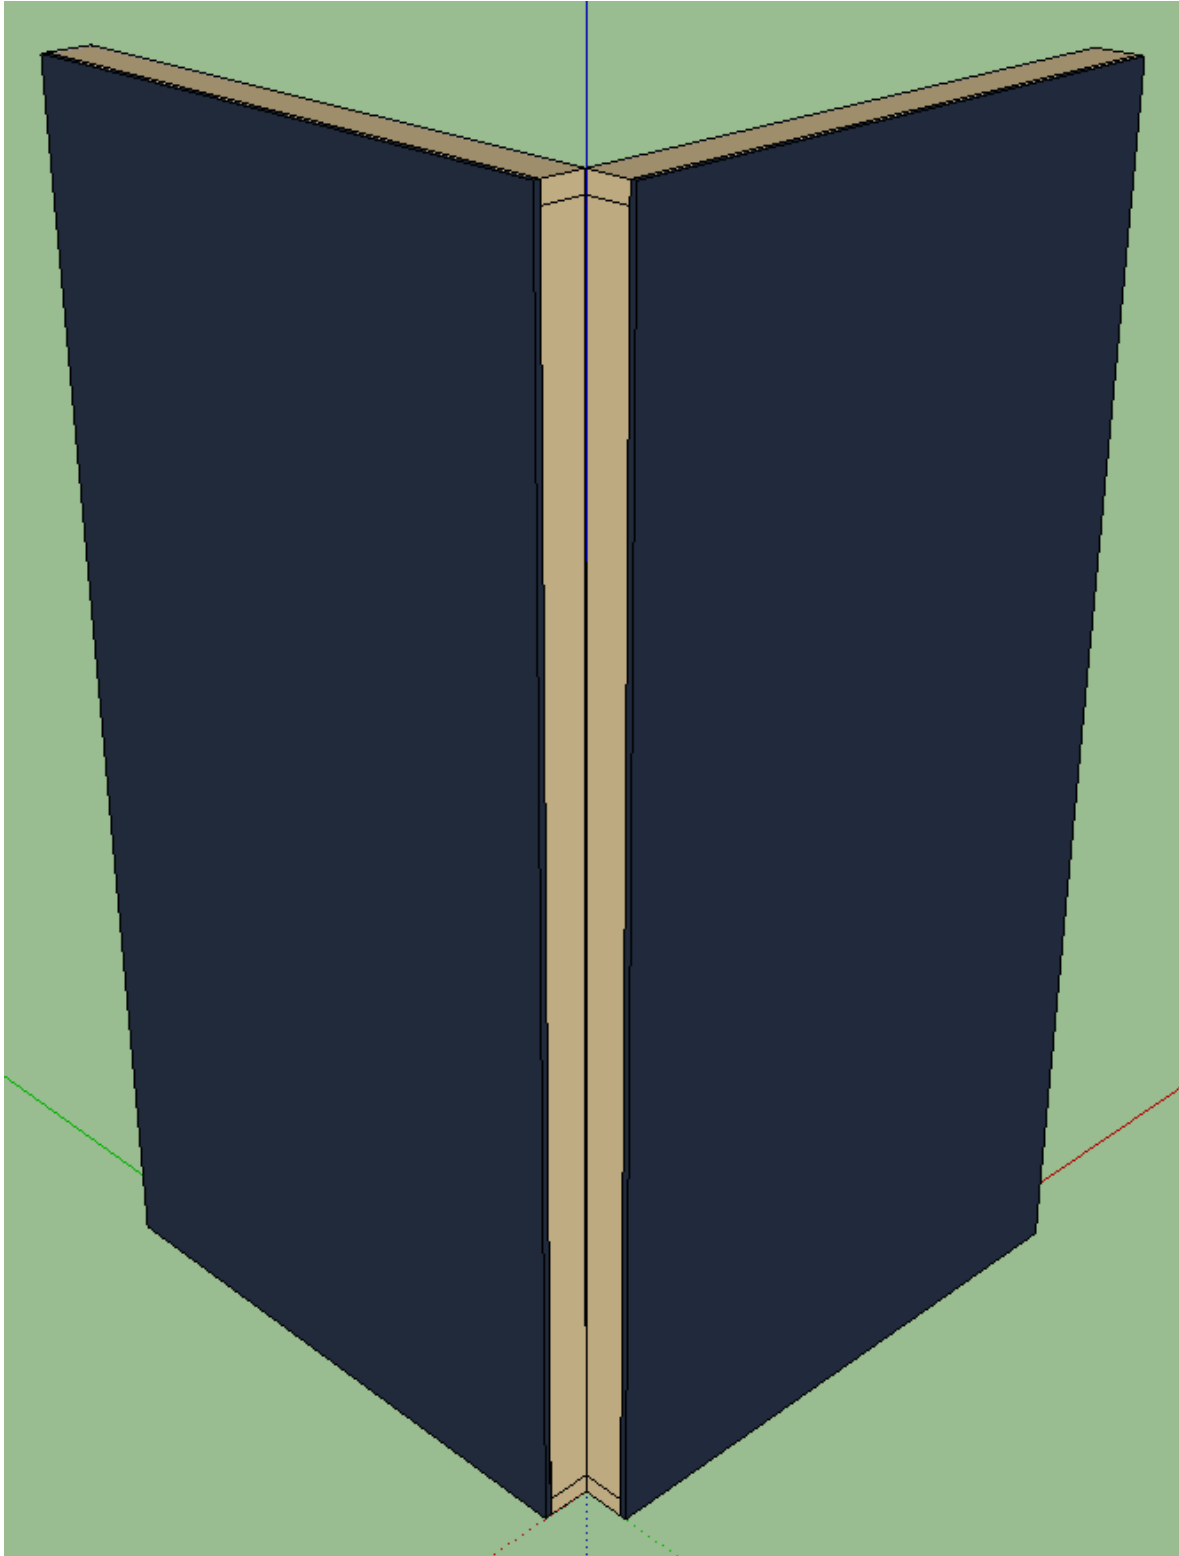

Appendix B (Google Maps Picture of Work Site)

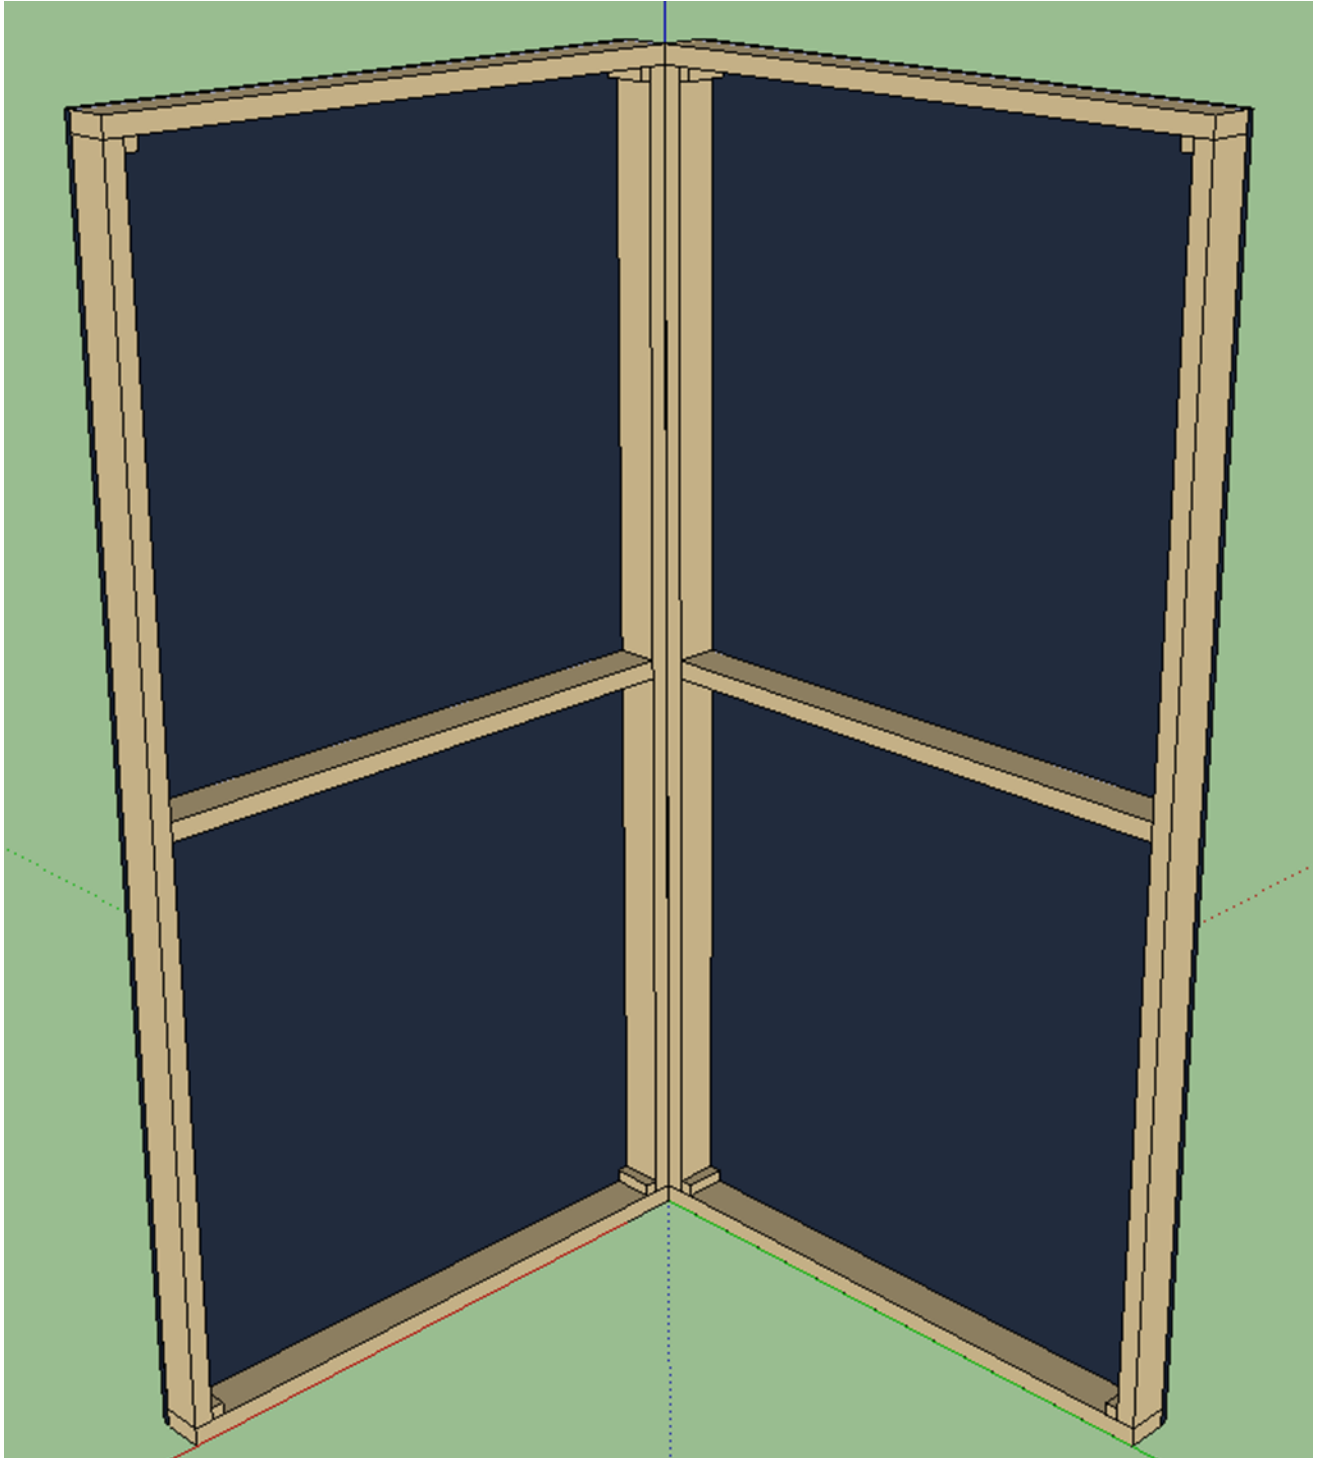

Appendix C (Google Maps Picture of Work Site)

Appendix D (Sketches of Art Display)

Appendix E (Sketches of Art Display)

Appendix F (Safety Issues)

- Safety cutting wood – distracted cutter, wood chips to the eyes, cut fingers/hands
- Safety in operating power tools – distracted operator, slivers to the eyes, cut fingers/hands
- Safety in operating manual tools – distracted operator, slivers to the eyes, cut fingers/hands
- Traffic control – volunteers being harmed by a moving vehicle
- Location of closest hospital – emergency maps
- Hazards to the eyes – objects flying into the eye and causing eye damage
- Hazards to the hands – cuts to the hands, splinters to the hands
- Hazards to the feet – toe injury due to falling object or stubbing
- Hazards going to strangers homes – abuses, kidnapping, or worse
- Hazards of meeting strangers alone in a store worksite – abuses ,kidnapping, or worse
- Hazards from dehydration, hazards from sun or heat, insects, poison ivy
- Add statement about age appropriateness for use of power tools if being used

Appendix G (List of Hopeful Donors)

- Lisa Broadwell

Appendix H (District Comments)

- All donations will be recorded on a Donation Log and all surplus funds will be given to the Beneficiary
- Have maps and directions to the nearest hospital
- Keep a Log of Volunteer Hours
- Use the Patrol Method in your leadership plan
- Follow the Guide to Safe Scouting and the Guide to Age Appropriate tools for your entire project
- Try to include before and after pictures in your Final write up (no progress pictures please)

Appendix I (Eagle Coach Comments)

- Add district comments
- Coach comments
- Copy of each email blast and email for donations
- Donation log
- Volunteer sign in sheets
- Copy of check written to beneficiary

[announce] Eagle Car Wash--Need help! 

 Troop 69 Email <lstadm@miltontroop69.org>
to Betty, Announce 

8/27/14 

Dear Fellow Scouts and Friends,

My name is Tyler Lee, I am a Life Scout as well as a senior at Cambridge High School. I am going to build art displays for the Cambridge Art Department for my Eagle Scout Project.

In order to fund this project I am organizing a car wash THIS SATURDAY, August 30th from 10:00 AM until 3:00 PM at the Chick-fil-A on Windward Parkway and need your help! Please email me at tle753@gmail.com with the hours you can assist with. Any time will be appreciated and lunch will be provided to participants at noon!

Parents, please consider stopping by and supporting this cause, and leaving with a sparkling vehicle!

Thank you!

Tyler

Appendix R (Donation Letter)

Dear Family/Friend,

Scouting is and will always be an integral part of my life from the drastically different experiences to the everyday skills that allow me to live a happier, more productive life. I have done everything from viewing the construction of fighter jets at Lockheed Martin to sliding down muddy chutes deep underground the Earth's surface and now I am attempting to earn Scouting's most prestigious achievement, the rank of Eagle.

My project consists of building eight to ten art displays for my high school's art department to allow students to portray their masterpieces in a professional setting. Each display will consist of two frames hinged together with a plywood board and insulation panel mounted on top. The entire surface of both sides will then be covered in a quality fabric that will resist tearing from the push-pins holding the artwork in place.

To obtain the funding required I held a car wash which, with the support of family and fellow scouts, raised nearly five hundred dollars! Yet, I am not quite at my goal of seven hundred to eight hundred dollars needed for such a substantial project. In order to make my project a reality, I am asking for the financial support of family and friends. If you are willing and able to donate I would be greatly appreciative. Any amount, even ten dollars would go far in helping me complete my Eagle Scout ranking. Checks can be made out to BSA Troop 69. Thank you in advance for your donation!

Yours in scouting,

Tyler Lee

	Grand Total	851.00

Appendix T (Work Processes)

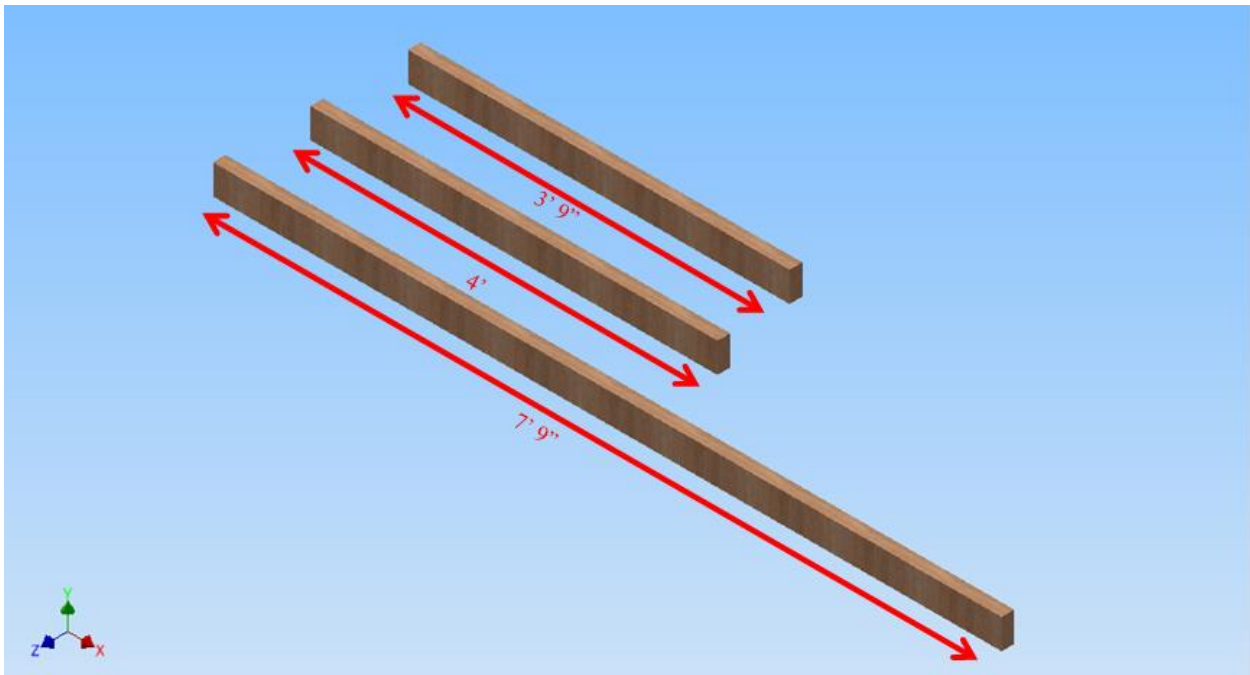

Reference Key:

Board = One OSB Panel, one polystyrene insulation panel, a 4' x 8' frame of two by fours with a two by four support piece in the middle, and a 5' x 9' piece of fabric stretched over the assembly

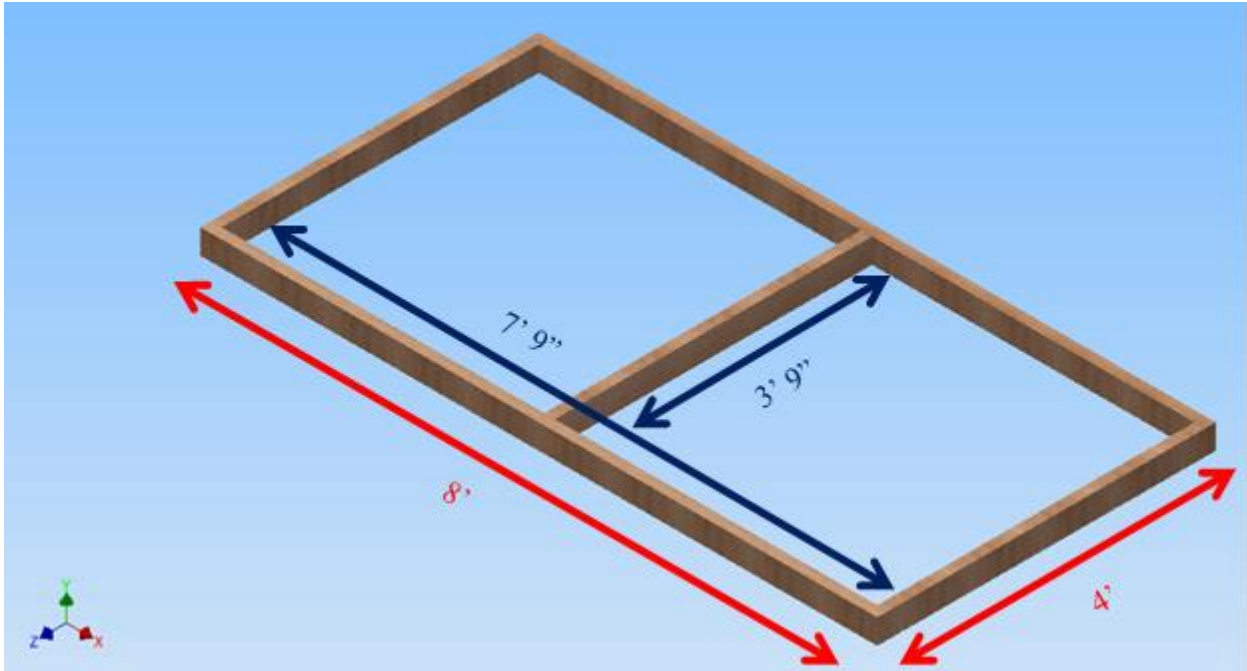

Display = Two Boards hinged together with 8 tacks on the bottom (four per board) (final product)

1) (Site Preparations) The first step is creating a suitable work site for woodworking operations which entails removing all potential obstacles from the garage floor and ensuring there are no potential hazards for construction. All tools and supplies needed should be placed appropriately in the work space along with proper safety equipment.

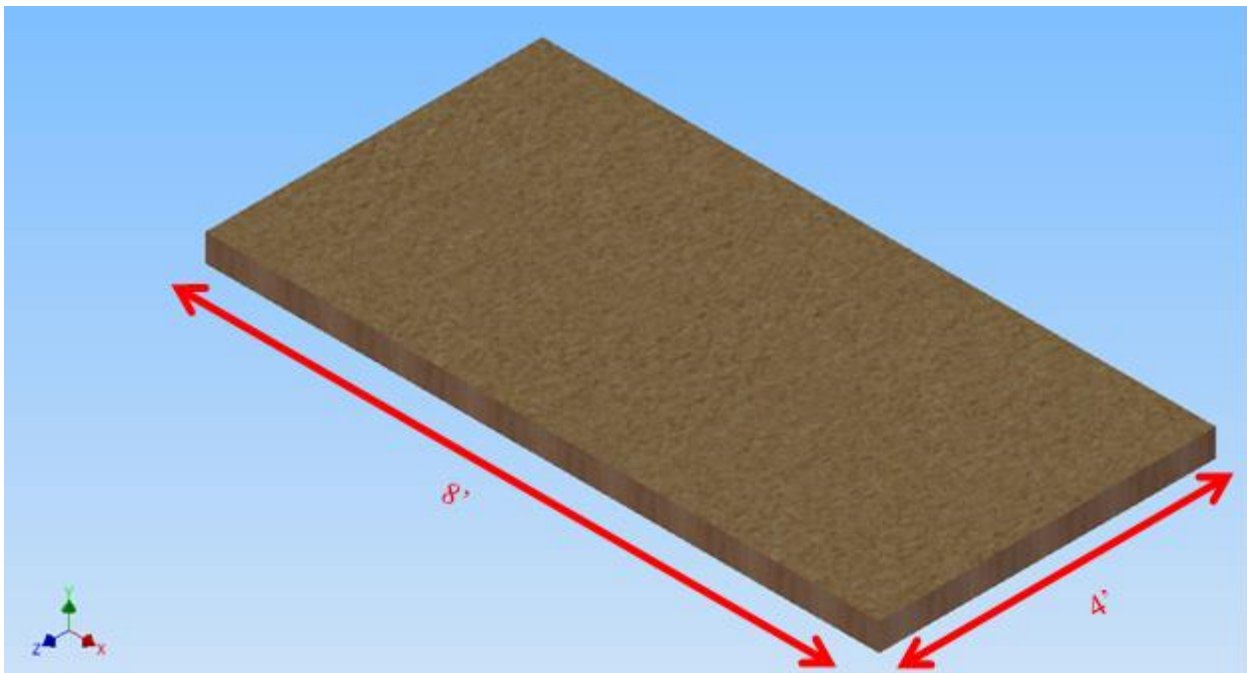

2) (Cutting Wood) The second step is cutting the wood with a miter saw to the correct dimensions which must be done by a qualified adult although dimensioning help can be provided by scout.

3) (Nail Wood) After aligning two 93" studs parallel to one another, lay a 48" stud on both ends and a 45" stud in the center (48" from either end) atop the level surface of the garage floor and nail the structure together with the help of workers standing atop the pieces to remove any movement and misalignment from hammering.

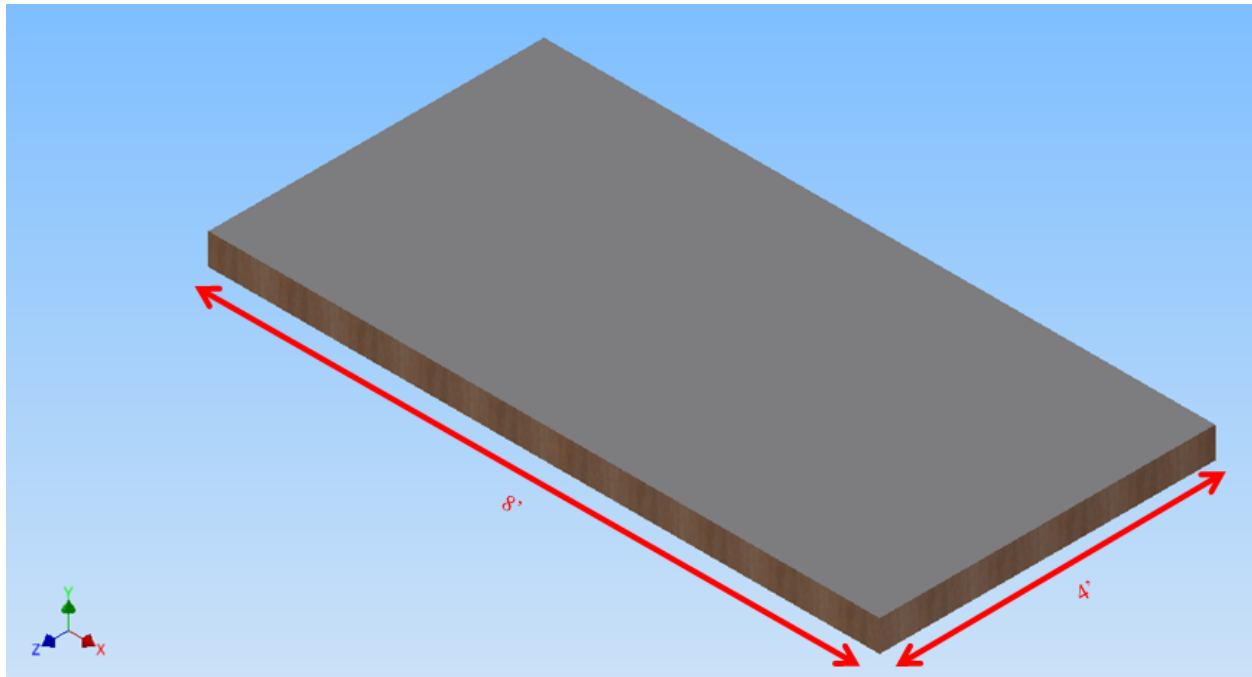

3) (OSB Panel) The frame wood is then laid out on the flat concrete to ensure proper alignment and screwed together using power drills. The OSB panel is then placed over the frame and screwed in once properly aligned. (Fits perfectly over the frame 4' x 8'.)

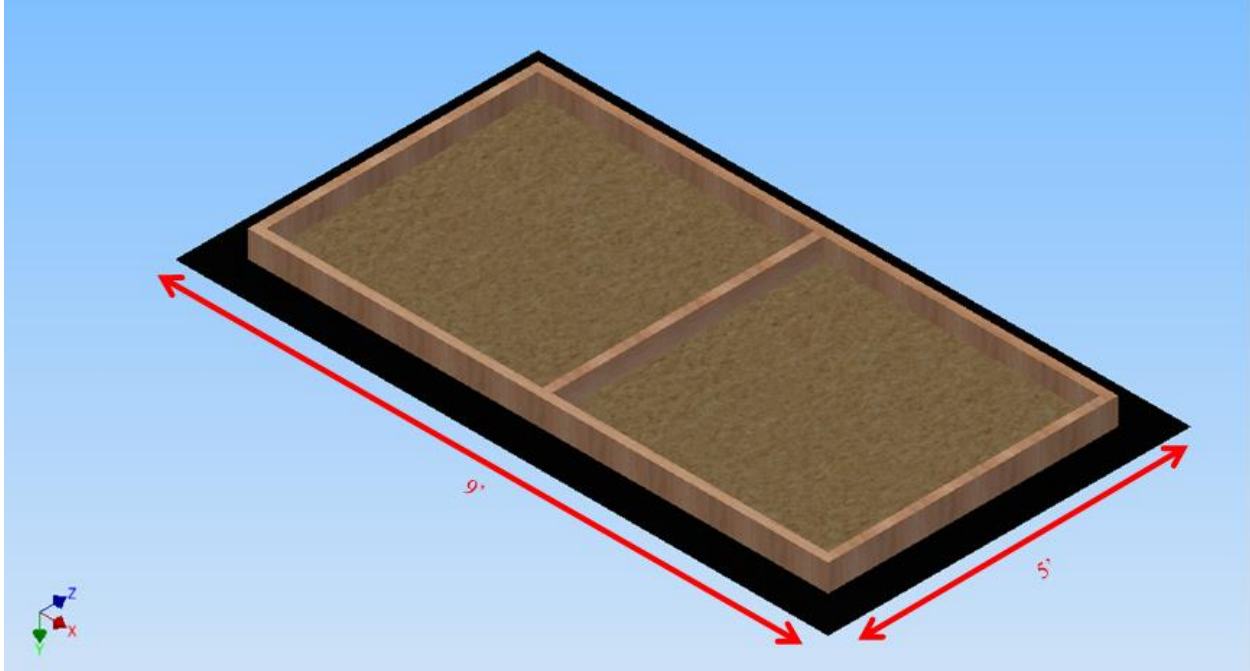

4) (Styrofoam) The next step is to use liquid nails to glue the polystyrene insulation panels over the OSB panel in an X pattern to maximize surface contact. Upon completion of gluing each display, stack the displays in stacks of 4 in an alternating fashion (insulation board sides facing

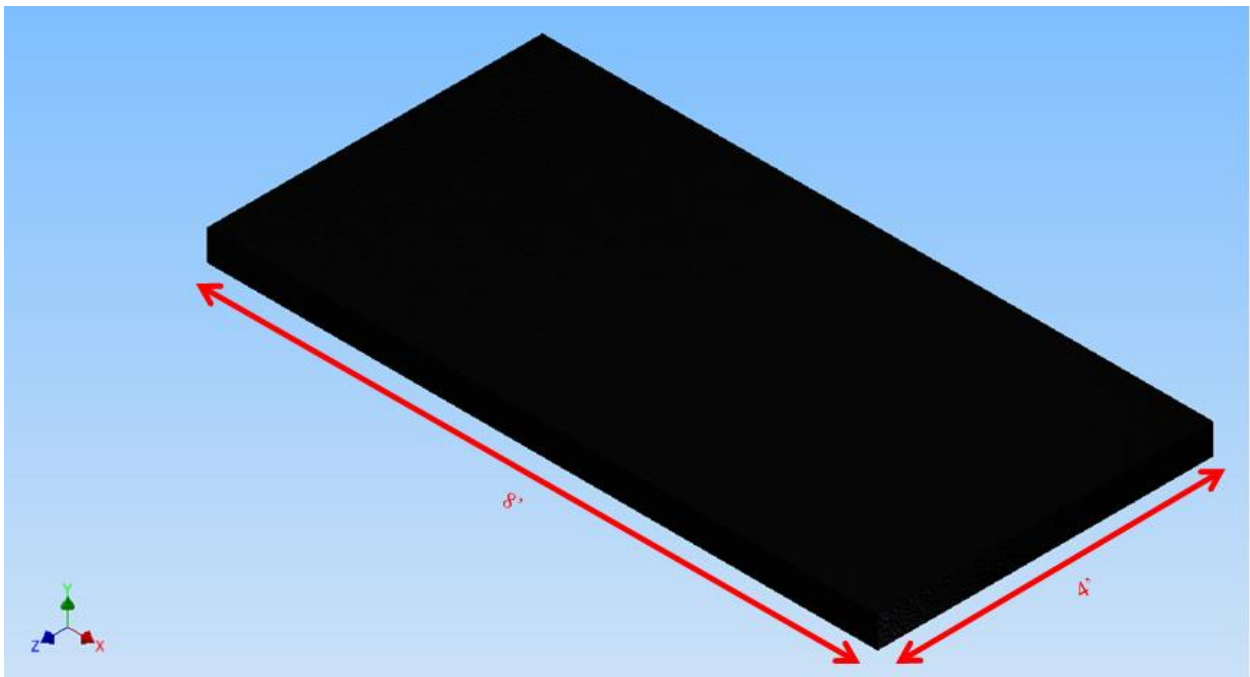

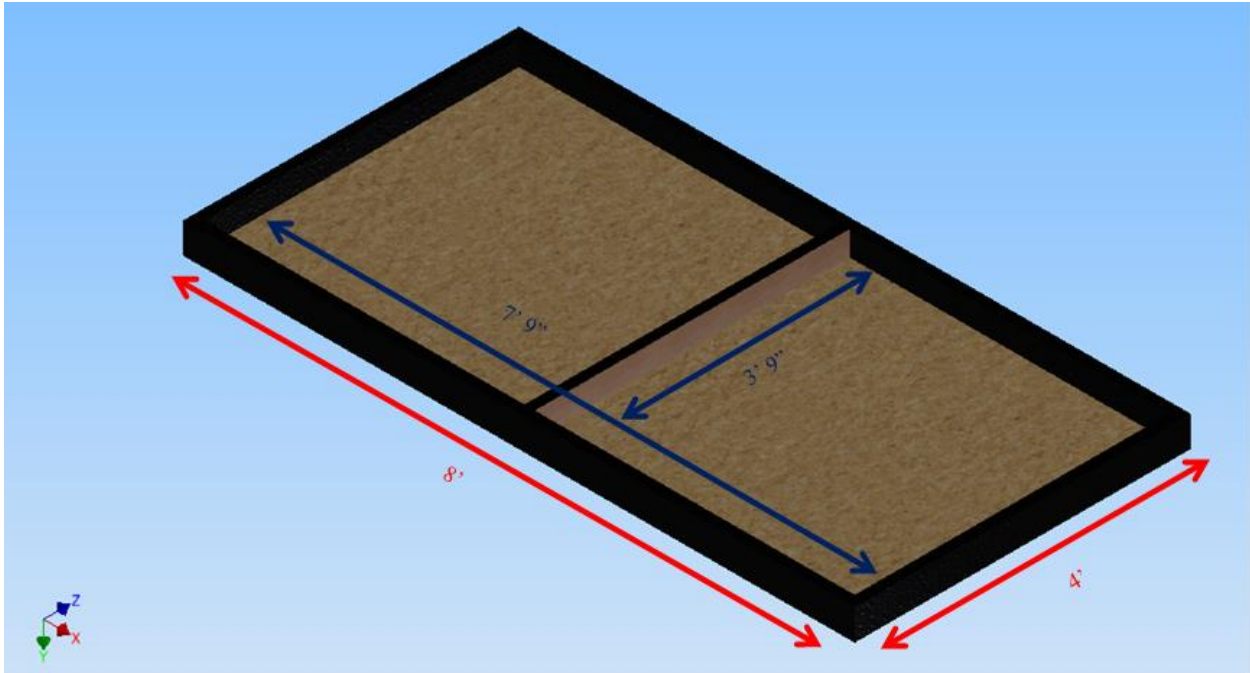

each other) to ensure pressure is applied to glue. The glue must be allowed to dry for at least 24 hours.

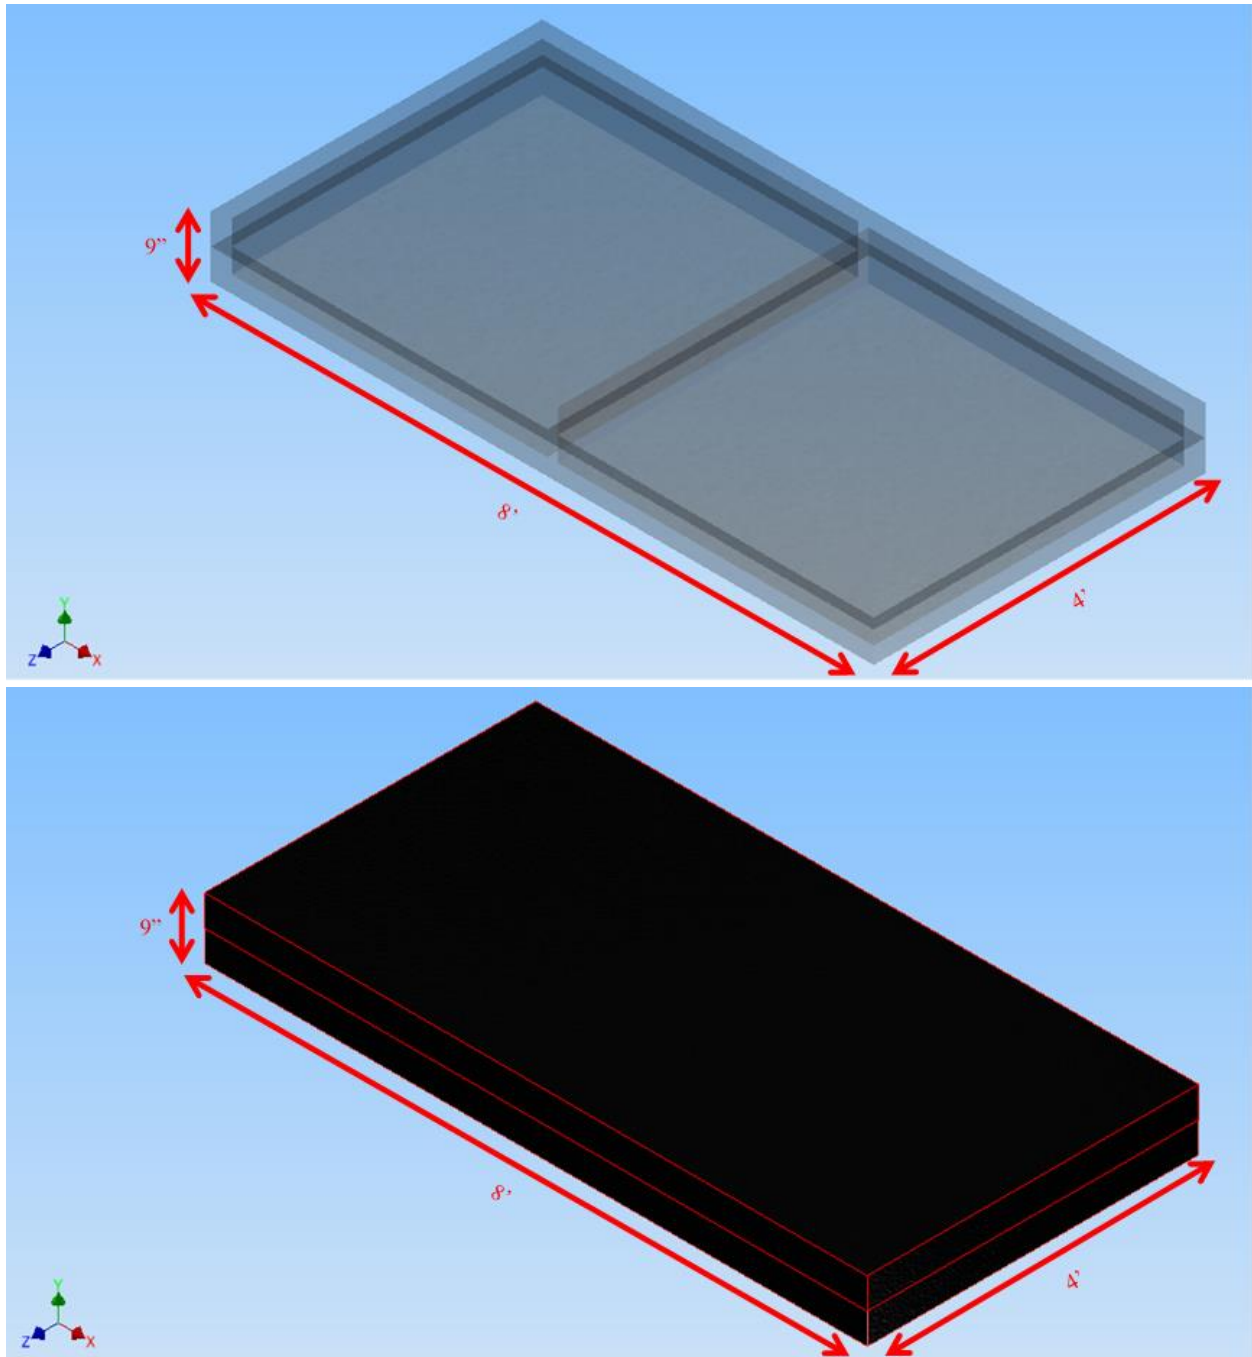

5) (Fabric Sides) The fabric is cut into 5 foot x 9 foot rectangles, ironed out, and laid atop a blanket on the garage floor. The polystyrene insulation board side of the displays is then placed atop the fabric and centered using a measuring tape to ensure the proper dimensions are in place. The staple gun at this point should be prepared for use to staple one of the long sides of the fabric to the back of the framing, leaving space at the corners to pull slack out later. (It does not need to be kept taught for this step.) Holding the fabric against the wood framing on the opposing long side of the frame, flip the display up 90 degrees and pull the fabric taught along the unstapled long side and begin stapling from the center outward, again leaving space at the corners. Still maintaining the 90 degree angle with the garage floor, the short sides of the display can be pulled taught and stapled, beginning in the center and working outward toward the corners without actually stapling the corners.

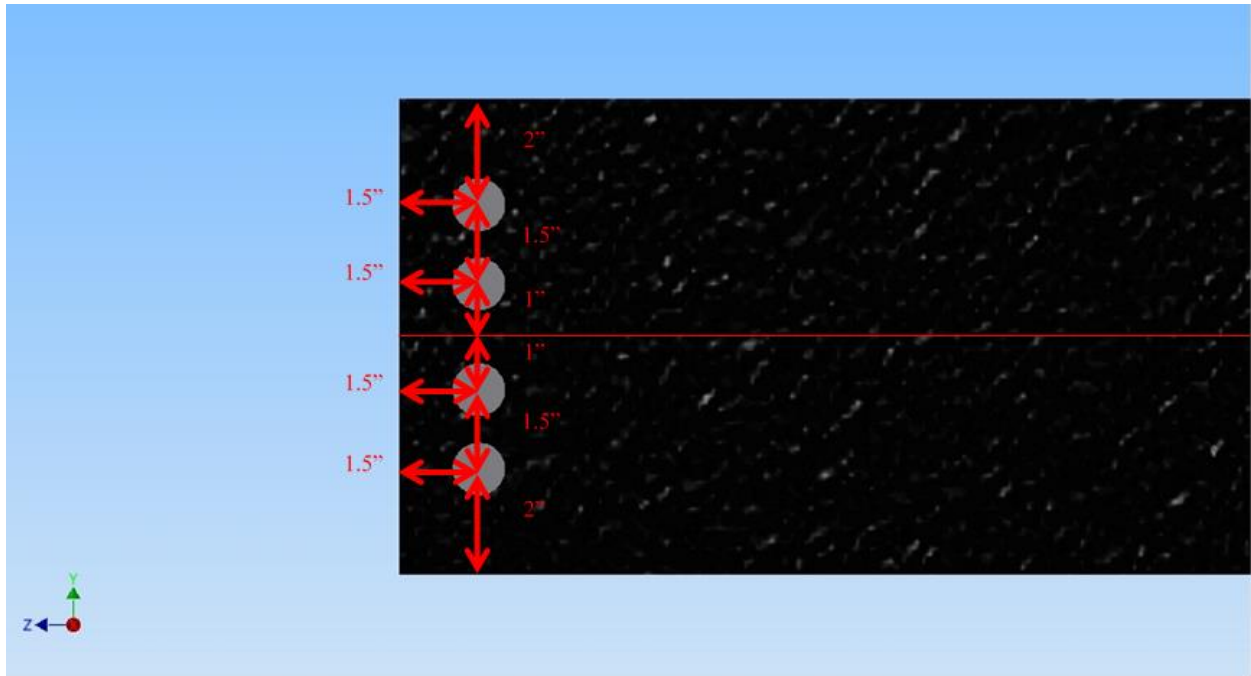

6) (Fabric Corners) While keeping the display at a 90 degree angle with the floor (for ease of access), pull the two corners taught by pulling away from the display as much as possible to ensure both sides are under maximum tension and then staple the fabric to the frame on the back side working toward the corner from both sides. After each corner has been stapled taught, take the extra fabric on the corner and fold it into a triangle (hospital corners) and staple it onto the backside framing. Once the accessible corners have been stapled, flip the display 180 degrees and repeat the corner process with the remaining two corners. Stack the boards upright to against a wall to conserve space upon completion.

7) (Hinges) A single display should be placed insulation board side down against the blanketed garage floor, and a second display should then be placed a top this display facing the opposite direction so that the backside or frames touch. Insert several half inch pieces of scrap wood between a long side of each board to ensure proper spacing for hinges. A pair of hinges can then be spaced 6 inches from each end and another pair spaced 32 inches from each end. Before screwing, ensure that all the pins on the hinges are facing the same direction, and use provided hinge screws to screw boards together into display.

8) (Tacks) Using a scrap piece of cardboard (or other similarly flat material) create a jig for hammering 8 tacks into the bottom of the displays by cutting out a 4 1/2" x 4" rectangle. Then cut small holes into the cardboard 1 1/2" from the long side of the cardboard and 1 inch from one of the short sides as well as 2 inches from the other short side. (Ensures the tacks are not nailed into plywood or insulation panels.) Align the jig along the bottom (opposite side the hinge pins face) and hammer the tacks in halfway before removing the jig and hammering the tacks in all the way. Flip the jig and repeat for each side of the board as well as repeating for the other board. (attached by hinges to create one display)

9) (Clean Up) Unplug all power tools, and return tools and supplies to owners, sweep the garage floor, and throw away all waste packaging. Leftover materials should be given to beneficiary for use at their discretion.
